

In-Home Care Risk Services Newsletter | Issue 4

Bloodborne Pathogens

For several months Ebola has been a front-page news item, and unless you live in a city that has treated infected healthcare workers, you may not have given it a second thought. Ebola is just one of many bloodborne pathogens, however, whose transmission can be prevented.

Composed of infectious microorganisms in human blood, bloodborne pathogens can present serious risks to your caregivers. The following links will provide you with access to newsletters that address these disease-causing pathogens, with proactive steps you can take to protect your caregivers.

[Bloodborne Pathogens Standards - OSHA](#)

[Bloodborne Pathogens Self-Inspection Checklist - OSHA](#)

[Preventing the Spread of Bloodborne Pathogens - The American Red Cross](#)
